### **MESSAGE**

The agriculture and allied sector constitute the foundational pillar of the Indian economy, engaging over 50% of the workforce and contributing approximately 18% to the country's Gross Value Added (GVA). Observations of advancements within this sector are of significant interest to policymakers, businesses, academia, and other pertinent stakeholders. The flagship publication, "Agricultural Statistics at a Glance," issued by the Economics, Statistics & Evaluation Division of the Department of Agriculture & Farmers Welfare, stands as a dependable source for assessing the performance of agriculture and its associated sectors in India. This publication offers a comprehensive and regularly updated database encompassing various dimensions of Indian agriculture, including crop production and productivity across states, agricultural growth and investment, production costs, minimum support prices, terms of trade, land-use statistics, agricultural inputs, rainfall patterns, food security, subsidies, agricultural insurance, among others.

The E,S&E Division has diligently revised and enhanced this publication to align with the evolving demands of the contemporary global agricultural landscape. Given the global emphasis on sustainable farming practices, this edition of the publication incorporates information on organic farming, CH<sub>4</sub> emissions from crop residue and rice cultivation, and water stress. Furthermore, to enhance accessibility and utility for users, this publication is concurrently released on our websites: [www.agriwelfare.gov.in](http://www.agriwelfare.gov.in) and <http://desagri.gov.in>.

I extend my commendations to Dr. Promodita Sathish, Adviser; Shri Sanjoy Meitei, Economic Officer; and Ms. Neha Arora, Technical Assistant, for their commendable efforts in expediting the release of this volume.

This publication will prove beneficial to policymakers, academics, research institutions, the agricultural business community, and all other relevant stakeholders. I eagerly anticipate feedback for further enhancements.

### PREFACE

"Agricultural Statistics at a Glance" is a flagship publication of the Economics, Statistics and Evaluation Division of the Department of Agriculture & Farmers Welfare. It serves as a comprehensive repository of up-to-date data pertaining to crucial parameters such as crop area, production, and productivity across various states, land utilization statistics, price support and procurement mechanisms, international trade dynamics, credit and insurance schemes, rainfall patterns, among others. Esteemed for its reliability, this publication is widely utilized as a principal source of information within the agricultural and allied sectors by policymakers, farmers, researchers, scientists, administrators, representatives from trade and industry, statisticians, economists, and the general populace.

The current edition of this publication has been meticulously updated to encompass the latest information across the aforementioned domains, while also incorporating insights into emerging issues within the agricultural sector. In an effort to enhance accessibility, a digital version of the publication has been made available on our websites: [www.agriwelfare.gov.in](http://www.agriwelfare.gov.in) and [desagri.gov.in](http://desagri.gov.in). Gratitude is extended to the various contributing Ministries, Departments, and Organizations for their provision of updated material for this publication.

Furthermore, appreciation is duly extended to all personnel within the AER Unit of the Department of Agriculture & Farmers Welfare, with particular acknowledgment bestowed upon Dr. Promodita Sathish, Adviser, and her team for their commendable efforts in expeditiously producing this volume. Constructive feedback and suggestions for further enhancements are earnestly welcomed.

Notes :

1. For 2001, figures include estimated figures for those of the three sub-divisions viz. Mao Maram, Paomata and Purul of Senapati district of Manipur as census results of 2001 Census in these three sub-divisions were cancelled due to technical and administrative reasons.
2. The 1991 Census could not be held owing to disturbed conditions prevailing in Jammu & Kashmir. Hence the population figures for 1991 of Jammu & Kashmir have been worked out by 'interpolation'. The data on workers in Col. 5-7 exclude J&K.
3. The 1981 census could not be held in Assam. The figures for 1981 for Assam have been worked out by interpolation. The data on workers in Col. 5-7 exclude Assam.
4. Figures within parentheses in Col.-4 are percentages to the Total Population.
5. Figures within parentheses in Col.-6 and 7 are percentages to Col.-8.
6. Figures within parentheses in Col.-8 is percentage share of Agricultural Workers in Total Workers.

Notes:

1. Figures are as per New CPI series introduced from January 2011. Data for this series is available with Base: 2012=100

2. Yearly indices are simple average of monthly indices

3. Figures in the parentheses show percentage Growth Rate (inflation) of CPI

4. Data is imputed for certain commodities for April, 2020 and May 2020 as due to COVID it was not feasible for the field enumerators to visit the specified retail outlets to collect data/price quotations

Imputed Sub-group Index (Food Group) = (Last Observed Index of Sub-group) x (Food Index of Current Month/Food Index of last Observed Month)

Imputed Sub-group Index (Non-Food Group) = (Last Observed Index of Sub-group) x (General CPI of Current Month/General CPI of last Observed Month)

5. CPI for 2021-22 is calculated with provisional data for the month of September 2021

P- Provisional figures are based on 4th Advance Estimates of Production for 2021-22, Net imports during Apr 2021- Mar 2022 and Stock position as on 23.11.2022

Notes:-

- i) Net availability of foodgrains is estimated as: Gross Production (-) seed, feed & wastage (-) exports (+) imports (+/-) change in stocks.
- ii) Net availability of foodgrains divided by the population estimates for a particular year indicate per capita availability of foodgrains in terms of kg/year.
- iii) Estimates of per capita net availability given above are not strictly representative of actual level of consumption in the country especially as they do not take into account any change in stocks in possession of traders, producers and consumers.
- iv) Foodgrains include rice, wheat, other cereals and all pulses
- v) The per capita net availability of foodgrains is calculated on Financial Year basis from 2022 onwards and is not comparable with the old series which was based on calendar year

Note: 1: Percentages worked out over Reported Area.

2: In 2009-10 there is significant decline in Total Cropped Area and Net Area Sown due to decline in net area sown in the States of Andhra Pradesh, Bihar, Jharkhand, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal. This was mainly due to deficient rainfall.

(P):Provisional

\* Cropping Intensity is percentage of the gross cropped area to the net area sown.

'0' relates to the area below 500 hectares.

\*The figures related to area under forest are taken from latest "State of Forest Report," of the Forest Survey of India, Dehradun. The other categories of land use, net irrigated area, gross irrigated area, net area sown and area under crops as the case may be, are taken from latest Agriculture Census or are estimated based on latest available year data received from the States/UTs respectively.

UT of Ladakh was bifurcated from the state of Jammu and Kashmir on 31st October, 2019. For Ladakh and Jammu & Kashmir, Area of Shape file was taken from Forest Survey of India, which is subject to change. The combined Geographical area for both UTs reported to be 222236 sq km.

Water stress is the ratio between total freshwater withdrawn by all major sectors and total renewable freshwater resources, after taking into account environmental water requirements.

**Cost of Cultivation/Production Estimates**

The Cost of Cultivation/ Production estimates used in the Publication are generated by the Cost Study Section of Economics, Statistics & Evaluation Division through Comprehensive Scheme for studying Cost of Cultivation of Principal Crops in India. The Scheme was initiated in 1970-71 on the recommendation of a technical committee on indices of input cost appointed by Government of India. The Scheme envisages collection of representative data on inputs and outputs in physical and monetary terms on a comparable and comprehensive basis following a well-designed scientific sampling methodology which has been designed by the Expert Committees and is reviewed from time to time by the Committees set up for the purpose. Present sampling design is a three-stage stratified random sampling, with tehsils as first stage units, a cluster of villages as second stage units and an operational holding in a cluster as the ultimate stage unit. For the purpose of drawing the sample, each State is divided into different agro-climatic zones based on climate, soil type, cropping pattern, etc. The field data are collected on the Cost Accounting Method by the IAs from 8100 sample operational holdings spread over 19 states. Daily entries of debit/credit for the expenditure/income are made in order to assess the total cost/benefit incurred/accrued to each farmer covered under the scheme.

2. The scheme presently covers major 25 crops (Paddy, Wheat, Jowar, Bajra, Maize, Ragi, Barley, Moong, Urad, Arhar, Gram, Lentil, Groundnut, Rapeseed & Mustard, Nigerseed, Safflower, Soyabean, Sunflower, Sesamum, Cotton, Jute, Sugarcane, Onion, Potato and Coconut) and these crops are selected for a block period of three years. The Cost of Cultivation/ Production Estimates being generated with the data collected under the scheme are used as an important input by CACP while recommending MSP of various crops. Apart from this, the data is also used by MoSPI for preparation of National Accounts Statistics. Marketed Surplus Ratio (MSR) which is required for various policy decisions is also compiled from this data.

3. Presently, the scheme is being implemented in 19 States through 16 Universities/Colleges also known as State Implementing Agencies (IAs). Funds are released to IAs through Grant-in-Aid. The Grants-in-Aid are meant for meeting the salary, allowances and office expenses of the Implementing Agency staff working in CS scheme.

**Explanatory Note**

**Advance Estimates**

During an agriculture year, Ministry of Agriculture and Farmers Welfare releases three advance estimates of area, production and yield, based on the data received from State Agricultural Statistical Authorities (SASAs). These estimates are “advance” in the sense that these have been prepared in advance of availability of results of CCE (Crop Cutting Experiments) and are subject to revision as more precise information flows over times from states to this Ministry.

**Yield**

Yield rate is defined as production per unit of area. However, yield rates of various crops given in this publication may not exactly tally with the ratio of production to the corresponding area because figures of area and production of various crops have been generally rounded off in ten thousands.

**Principal Crops**

Principal Crops as referred to in this publication include only those crops which are covered for preparation of index numbers. The details of these crops are given in Appendix III.

**Nine Oilseeds**

Wherever “Nine oilseeds” is mentioned in this publication, it includes Castor seed, Groundnut, Linseed, Nigerseed, Safflower, Sesamum, Soyabean, Sunflower and Rapeseed & Mustard.

## Methodology of Index Numbers of Area, Production and Yield

### Base Year

The Directorate of Economics and Statistics (DES) had adopted Triennium Ending (T.E.) 1981-82 as base year for the purpose of Index Numbers of Area, Production and Yield in Agriculture until 1999-2000. In 2000-2001, it was decided to adopt T.E. 1993-94 as a way of updating the base to a recent year and keep it in harmony with the other series of indices such as Index of Industrial Production, Wholesale Price Index and the series of National Accounts Statistics. Since area and production in agriculture can fluctuate a great deal from year to year, the average of area/production over the TE 1993-94 was taken as the base year.

It was observed that the base year 1993-94 used for construction of index numbers of Area, Production and Yield of crops has become outdated and stressed on the need for updating of the base year at regular intervals preferably in consonance with the base year revisions of other important indices.

As the period 2005-06 to 2007-08 remained normal from agriculture point of view and the price data available with CSO was for the year 2006-07 which could be used as mid period price for assessment of contribution in value terms for preparation of weighting diagram, it has been considered appropriate to take more recent base, i.e., (TE 2007-08 = 100) as the base for agricultural indices.

### Weighting Diagram

The weight of a commodity for the production index is taken as the average production of the commodity in the T.E. 2007-08 and the national average price of the commodity during 2006-07 as obtained from the National Accounts Statistics. This has been done to fix the base production at its average level by eliminating the cyclical variation and to evaluate the production with the same price for all States in view of wide variations observed in the state prices.

### Methodology

Let  $a_{ij}$  - the area under  $i^{\text{th}}$  crop in the  $j^{\text{th}}$  year.  
 $a_{i0}$  - the area under  $i^{\text{th}}$  crop in base year period.  
 $p_{ij}$  - production of  $i^{\text{th}}$  crop in the  $j^{\text{th}}$  year.  
 $p_{i0}$  - production of  $i^{\text{th}}$  crop in base year period.  
 $w_i$  - weight of  $i^{\text{th}}$  crop.

For the the year  $j$ , individual crop indices are calculated as below :

$$(a) \text{ Index number of area} = \frac{a_{ij}}{a_{i0}} \times 100 = IA_{ij}$$

$$I. \quad \text{Index number of production} = \frac{P_{ij}}{P_{i0}} \times 100 = IP_{ij}$$

$$(c) \text{ Index number of yield} = \frac{IP_{ij}}{IA_{ij}} \times 100$$

For any sub-group  $G$  of commodities, the indices for the year  $j$  are calculated as below:

$$a) \text{ Index number of area} = \frac{\sum_{i \in G} w_i IA_{ij}}{\sum_{i \in G} w_i}$$

$$b) \text{ Index number of production} = \frac{\sum_{i \in G} w_i IP_{ij}}{\sum_{i \in G} w_i}$$

$$c) \text{ Index number of yield} = \frac{\text{Index number of production} \times 100}{\text{Index number of area}}$$

### 1.1 Introduction

The Economics, Statistics and Evaluation Division, Department of Agriculture & Farmers Welfare releases estimates of area, production and yield in respect of principal crops of food grains, oilseeds, sugarcane, fibers and important commercial crops. These crops account for a significant share in the Gross Value Added by agriculture and allied sector. The estimates of crop production are obtained by multiplication of area estimates by corresponding yield estimates. The estimates of area and yield rates assume prime importance in the entire gamut of agricultural statistics.

### 1.2 Area Statistics

From the point of view of collection of area statistics, the States in the country are divided into three broad categories. The first category covers States and UTs which are cadastrally surveyed and the area and land use statistics are built up as a part of the land records maintained by the revenue agencies, these states are called "Land Record States" or temporarily settled States. This system is followed in 18 major states of Andhra Pradesh, Assam (excluding hilly districts), Bihar, Chhattisgarh, Gujarat, Haryana, Himachal Pradesh, Jammu & Kashmir, Jharkhand, Karnataka, Madhya Pradesh, Maharashtra, Punjab, Rajasthan, Tamil Nadu, Telangana, Uttar Pradesh and Uttarakhand and 4 UTs of Chandigarh, Delhi, Dadra & Nagar Haveli and Puducherry. These States/UTs account for about 86% of reporting area and are covered under Timely Reporting Scheme (TRS) under which 20% villages are selected at random for complete area enumeration.

The second category includes those States where area statistics are collected on the basis of sample surveys conducted under the scheme of Establishment of an Agency for Reporting of Agricultural Statistics (EARAS). This scheme was introduced in Kerala, Odisha and West Bengal, and later extended to Arunachal Pradesh, Nagaland, Sikkim and Tripura. The scheme envisages, inter-alia, estimation of area through sample surveys in a sufficiently large sample of 20% villages/ investigator zones. These states account for about 9% of reporting area.

The third category covers the hilly districts of Assam, the rest of North-Eastern states (other than Arunachal Pradesh, Nagaland, Tripura and Sikkim), Goa, UTs of Andaman & Nicobar Islands, Daman & Diu and Lakshadweep where no reporting agency had been functioning. In this category of states, work of collection of Agricultural Statistics is entrusted with the village headmen. The area statistics in these states are based on impressionistic approach. These areas/states account for 5% of the reporting area.

Keeping in phase with technological advancements and digitalization across the various sectors, this Ministry has undertaken the implementation of Digital Crop Survey (DCS). The DCS facilitates the village wise crop area for each season for an agricultural year. Hence, as per new guidelines issued by ES&E Division, DA&FW the village wise area estimates shall be prepared on the basis of Digital crop survey (DCS) (i.e. 100% villages coverage) instead of TRS/ EARAS based estimates. However, in those states where DCS is not yet fully implemented, they may continue to follow the existing methodology of 20% sampled villages till the State gets on boarded into DCS.

### 1.3 Yield Estimates

The second most important component of production statistics is yield rates. The yield estimates of major crops are obtained through analysis of Crop Cutting Experiments (CCE) conducted under scientifically designed General Crop Estimation Surveys (GCES). At present over 95% of the production of foodgrains is estimated on the basis of yield rates obtained from the CCEs. Field Operations Divisions (FOD) of the National Statistical Office (NSO) has been

providing technical guidance to the States and Union territories for organizing and conducting Crop Estimation Surveys for estimating yield rates of principal crops. In addition, NSO in collaboration with States/Union Territories implements sample check programmes on area enumeration work, area aggregation and conduct of crop cutting experiments under the Scheme for Improvement of Crop Statistics (ICS). While executing the programme of sample checks on crop cutting experiments, the FOD associates itself with the operational aspects of the conduct of crop cutting experiments right from selection of sample villages, training of field staff to the supervision of field work, and in the process gathers micro level information relating to conduct of crop cutting experiments for estimation of crop yield. NSO regularly brought out its annual publication entitled “Consolidated Results of Crop Estimation Surveys on Principal Crops”.

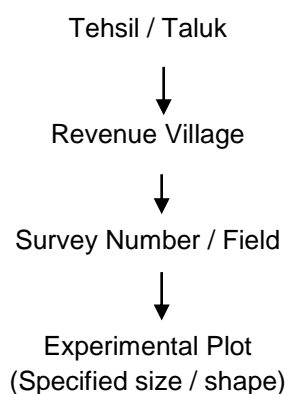

The primary objective of GCES is to obtain fairly reliable estimates of average yield of principal food and non-food crops for States and UTs which are important from the point of view of crop production. The estimates of yield rates thus arrived at are generally adopted for the purposes of planning, policy formulation and implementation. The CCEs consist of identification and marking of experimental plots of a specified size and shape in a selected field on the principle of random sampling, harvesting and threshing the produce and recording of the harvested produce for determining the percentage recovery of dry grains or the marketable form of the produce.

To record the details of Crop Cutting Experiments (CCEs) for yield estimation under GCES, the Ministry has developed a simple and user-friendly web portal and mobile application with the facilities of geo-tagging and photo validation of crop fields.

### 1.5 Sampling Design

Stratified multi-stage random sampling design is generally adopted for carrying out GCES with tehsils/ taluks/ revenue inspector circles/ CD blocks/ anchals, etc., as strata, revenue villages within a stratum as first stage unit of sampling, survey numbers/fields within each selected village as sampling unit at the second stage and experimental plot of a specified shape and size as the ultimate unit of sampling as depicted in **Figure 1.1**.

**Figure 1.1: SAMPLING DESIGN for GCES**

In each selected primary unit, generally 2 survey numbers/fields growing the experimental crop are selected for conducting CCE. Generally, 80-120 experiments are selected in a major crop growing district, where a district is considered as major for a given crop if the area under the crop in the district exceeds 80,000 hectares or lies between 40,000 and 80,000 hectares but exceeds the average area per district in the State. Otherwise, the district is considered as minor for a given crop. Experiments in minor districts are so adjusted that the precision of the estimates is fairly high and the workload on the field staff is manageable. On an average, about 44 or 46 experiments are planned in a minor district. The number of experiments allotted to a district is distributed among the strata within the district roughly in proportion to the area under the crop in the stratum.

### **1.6 Advance Estimates of Area and Production**

The period of an agricultural crop year is from July to June, during which various farm operations from preparation of seed bed, nursery, sowing, transplanting various inter-culture operations, harvesting, threshing etc. are carried out. Different crops are grown during the agricultural seasons in a crop year.

Final estimates of production based on complete enumeration of area and yield through crop cutting experiments become available much after the crops are actually harvested. However, the Government requires advance estimates of production for taking various policy decisions relating to pricing, marketing, export/import, distribution, etc. The main factors contributing to the relatively large number of crop estimates are the large variations in crop seasons across the country. Further, from the year 2022-23, the estimates schedules and number of estimates have been revamped considering the genuine and timely requirement of crop estimates much before the crops are harvested for various policy purposes. The revamped timelines for releasing the crop production estimates are elaborated as under:

#### **1.7 First Advance Estimates**

The first advance estimates of area and production of Kharif crops are prepared and released in October every year, when south-west monsoon season is about to be over and Kharif crops are at an advanced stage of maturity. The assessment is made by the State Governments based on the reports from the field offices of the State Department of Agriculture. They are mainly guided by field observations. These are validated on the basis of inputs from the proceedings of Crop Weather Watch Group (CWWG) meetings, and other feedback such as relevant availability of water in major reservoirs, availability/supply of important inputs including credit to farmers, rainfall, temperature, irrigation area enumeration based on Remote Sensing Technology, estimates from Econometrics Modeling etc.

#### **1.8 Second Advance Estimates**

The second advance estimates are prepared and released in the month of February every year. This estimate consists of kharif and rabi season only. The advance estimates of Kharif crops may undergo a revision in the light of flow of more precise information of area and receipt of CCEs from the State Governments. The Second Advance Estimates then cover the second assessment in respect of Kharif Crops and the first assessment in respect of Rabi Crops which is based on field observation and other related parameters.

#### **1.9 Third Advance Estimates**

The third advance estimates for all the seasons i.e. kharif, rabi and summer are prepared and released in the month of May/June every year. From the Agriculture Year 2022-23 the Rabi season has been segregated into Rabi and Summer season. The earlier advance estimates of both Kharif and Rabi seasons are firmed up/ validated with the information available with State Agricultural Statistical Authorities (SASAs), remote sensing data, available with Space Application Centre, Ahmedabad as well as the proceedings of CWWG. The summer crops estimates are based on field observation and other related parameters.

### **1.10 Final Estimates**

From the Agriculture Year 2022-23 the erstwhile Fourth Advance Estimates is being generated as Final Estimate of the Agriculture Year and are prepared and released in the month of September. The Final Estimate includes all three seasons i.e. Kharif, Rabi and Summer. The states submit finalized area and yield based on CCEs conducted. Further, all other alternative sources such as remote sensing data, econometric modelling, weather conditions etc. are considered in finalizing the estimates. No changes in the crop estimates are entertained after the release of Final Estimate.

### **1.11 Forecasting Agricultural Output using Space, Agro-meteorology and Land based observations (FASAL)**

Under the FASAL scheme, forecasts of area, production and yield based upon Remote Sensing and econometric modeling are generated. The agencies involved under the scheme are Space Application Centre (SAC), Ahmedabad, Institute of Economic Growth (IEG), New Delhi and India Meteorological Department (IMD). Under the scheme, multiple in-season forecasts of area & production of specified crops at National/State level are envisaged. Inputs from remote sensing, weather and field observations are used for validating the forecasts and inferences for desired coverage, accuracy and timeliness.

DAC&FW has established Mahalanobis National Crop Forecast Centre (MNCFC) on April 23, 2012 which operationalises Remote Sensing Methodology on crop forecast and drought assessments in collaboration with ISRO. These forecasts are used to validate the official crop estimates based the conventional system. Multiple forecast of 11 major crops namely Rice (Kharif & Rabi), Jowar (Kharif & Rabi), Maize, Bajra, Jute, Ragi, Cotton, Sugarcane, Groundnut (Kharif & Rabi), Rapeseed & Mustard and Wheat were envisaged at National/State/District level. However, based on the technological feasibility and requirement, 11 crops are modified to Rice (Kharif & Rabi), Jowar(Rabi), Maize (Rabi), Soybean, Jute, Pulses (Rabi), Cotton, Sugarcane and Groundnut(Rabi), Rapeseed & Mustard and Wheat. Presently, the experimental forecasts in respect of 8 crops are being prepared namely, Wheat, Rice (Kharif and Rabi), Jute, Sugarcane, Cotton, Rapeseed/mustard, Rabi sorghum and Rabi Pulses.

The programme uses optical and microwave remote sensing data of Indian and foreign satellites. The field data (ground truth) collection is carried out using Smartphone. The activities are carried out in collaboration with 19 State Agriculture Departments, 16 State Remote Sensing Centres, ISRO, IMD, IEG and State Agriculture Universities.

### **1.12 Achievements of FASAL project**

FASAL is a national level project of Ministry of Agriculture & Farmers Welfare under Integrated Scheme on Agriculture Census, Economics and Statistics. Under FASAL project, pre-harvest multiple Crop production forecasts at District/State/National Level are generated for 8 major crops (Rice, Wheat, Cotton, Sugarcane, Jute, Rabi Jowar, Rabi Pulses and Rapeseed & Mustard) using satellite and agro-meteorological data.

In a year, all total 16 forecasts (Rice-3, Wheat-3, Rapeseed & Mustard-3, Jute-1, Cotton-2, Sugarcane-2, Rabi Pulses -1 and Rabi Jowar-1) are generated. The results are shared with DAC&FW, State Agriculture Departments and other partner agencies.

### **1.13 Extended Range Forecast System (ERFS)**

The IMD has been providing weather forecast with lead-time of five days only and that too for four broad geographical regions of the country. It leaves little lead-time to farmers for undertaking crop management decisions. Therefore, the Department of Agriculture, Cooperation and Farmers Welfare has sponsored a project entitled "Development and Application of Extended Range Forecast System for Climate Risk Management in Agriculture (ERFS)" since 2006 in collaboration with other partner organizations, viz., Indian Institute of

Technology (IIT), India Meteorological Department (IMD), National Centre for Medium Range Weather Forecast (NCMRWF), Space Application Centre (SAC) Ahmedabad and Indian Council of Agriculture Research (ICAR).

The project aims at generating extended range deterministic and probabilistic rainfall and temperature forecasts for metrological sub-divisions of India at monthly and seasonal scale and disseminating it to the farming community and to advise them about various measures. The project was completed on 31st October, 2018 and outcome has been transferred to IMD and MNCFC. The weather forecasting of precipitation and air temperature on monthly and seasonal scale has immense importance in agriculture as it offers extra lead time to farming community for decision making in adverse conditions.
